# CORAL

1 9 7 5

**1975** Coral Electronic is established. We start our first production: home hi-fi loudspeaker systems.

**1981** We introduce the first separate speaker system of the Italian car audio market.

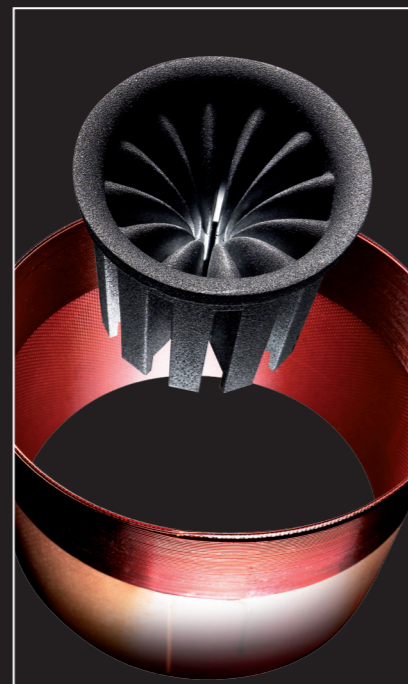

**1983** We introduce SBS 501: the first car audio active subwoofer system with built-in crossover.

**1986** In order to concentrate our efforts on the car audio market, we transfer to a separate company the home hi-fi production.

**1993** We introduce NTE 1000: the first asymmetric Butterworth/Bessel electronic crossover.

**1994** We introduce HE 98: the first Transmission Line Tuning tweeter, elected product of the year by ECAP for its remarkable technological innovation.

**1995** We introduce HA line: a new reference standard in amplifier quality. The ASC (Active Subwoofer Control) circuit allows to rightly interface the subwoofer with the inside-car acoustics.

**1997** We introduce APX 3000: the first car audio ambience signal processor complete with space control and powered centre channel.

**2000** We introduce XTR 300: a top-quality class-D active subwoofer with built-in filter.

**2001** We introduce SB 220: the first car audio subwoofer box manufactured by rotational moulding system and using linear high-density polyethylene.

**2004** We introduce Target Audio: a complete range of loudspeaker to enlarge our offer to young people.

**2006** Coral Electronic takes-over Indiana Line, one of the oldest Italian manufacturer of home hi-fi loudspeaker systems: a new group is born in the audio market.

# indiana line

1 9 7 7

Since the **1977**, when Indiana Line appeared on the market, Indiana Line has hold fast to its thought: the realisation of loudspeaker systems with nice-looking and rational shapes, with authentic contents. The sound quality of the Indiana Line speakers is constant trough all the models.

Ever open to innovation, among the first Indiana Line has given a strong pulse to mini-speakers, using in original mode the bass-reflex philosophy and has tuned-up special crossover networks.

All the woofers, starting from the smallest bookshelf speaker, ending to the top of the line, are using high quality reinforced polypropylene cones; having the possibility to design our own woofers with the required parameters, including the bandwidth necessary for a right interface with the upper frequency units, we reach the return to use very simplified crossover networks, with a lot of positive influences.

The treated silk dome tweeters are driven by neodymium magnets

and provided with rear chambers to avoid standing waves.

The tuning of the timbre of our speakers is assigned almost always to the same listening panel, so that there is the right tonal balance between each model of the same line.

There are, on the other side, many differences between the several lines, caused by the different designs generated by different destinations or final customers.

**2006** Indiana Line is annexed in Coral Electronic: starting from the experience of two historical Italian manufacturers, a new group is born in the audio market.
